Sartomer Introduces Less Volatile Monomer for Peroxide-cure Applications

EXTON, Pa., March 18, 2009 – Global specialty chemicals manufacturer Sartomer Company introduces a new, less volatile, liquid-form, alkyl dimethacrylate monomer for peroxide-cure applications in coatings, composites, elastomers, adhesives, sealants and polymer modification.

CD262 is a low viscosity, low volatility, hydrophobic monomer that provides a good combination of fast cure, hardness and flexibility when used in free radical polymerization. It also improves water resistance and surface cure characteristics.

For complete technical details, visit Sartomer's online technical library at www.sartomer.com or call the technical hotline at 800-SARTOMER.

Sartomer Company, part of Total's Chemicals branch, is a U.S.-based manufacturer of specialty chemicals. Headquartered in Exton, Pa., Sartomer provides a variety of specialty chemicals designed to enhance processing and performance characteristics in coatings, inks, elastomers, adhesives, sealants, composites, and other demanding applications. The company's product offering includes more than 700 monomers and oligomers, polybutadiene resins, styrene maleic anhydride resins, and other specialty chemicals.
